

# LOCAL WATER SOLUTIONS

LOCAL LASTS LONGER.

Water is life...and death!

A lack of access to water or safe drinking water has dire consequences. In sub-Saharan Africa, over 40% of children drink contaminated water, causing millions of deaths and illnesses. Obtaining water can be arduous and time-consuming. Every year African women spend billions of hours collecting water and transporting it to their homes.

Africa Oasis believes that everyone should have access to clean drinking water. We work alongside communities to improve access to uncontaminated, life-giving water through catchment systems, water wells, and bucket filters.
